

In today's class, we will talk about a number of issues related to our private home design through light.

In the lesson today we will learn exactly what it takes to light up the house at different and special angles that will eventually give us a beautiful and impressive look

Lighting in Home Design

Cube-Think Diffrent
On line design college

An electrician is the one who will assemble the lighting fixtures in the space itself

It is the designer who decides what lighting fixtures will be - in collaboration- with the client.

There are a huge variety of lighting fixtures in the market and the possibilities are huge. The right way to choose the lighting fixtures is to carefully examine the space and understand the design style we chose in the first place.

Instead of deceiving different media trends, we must be true to our design taste that we have chosen.

Cube-Think Diffrent
On line design college

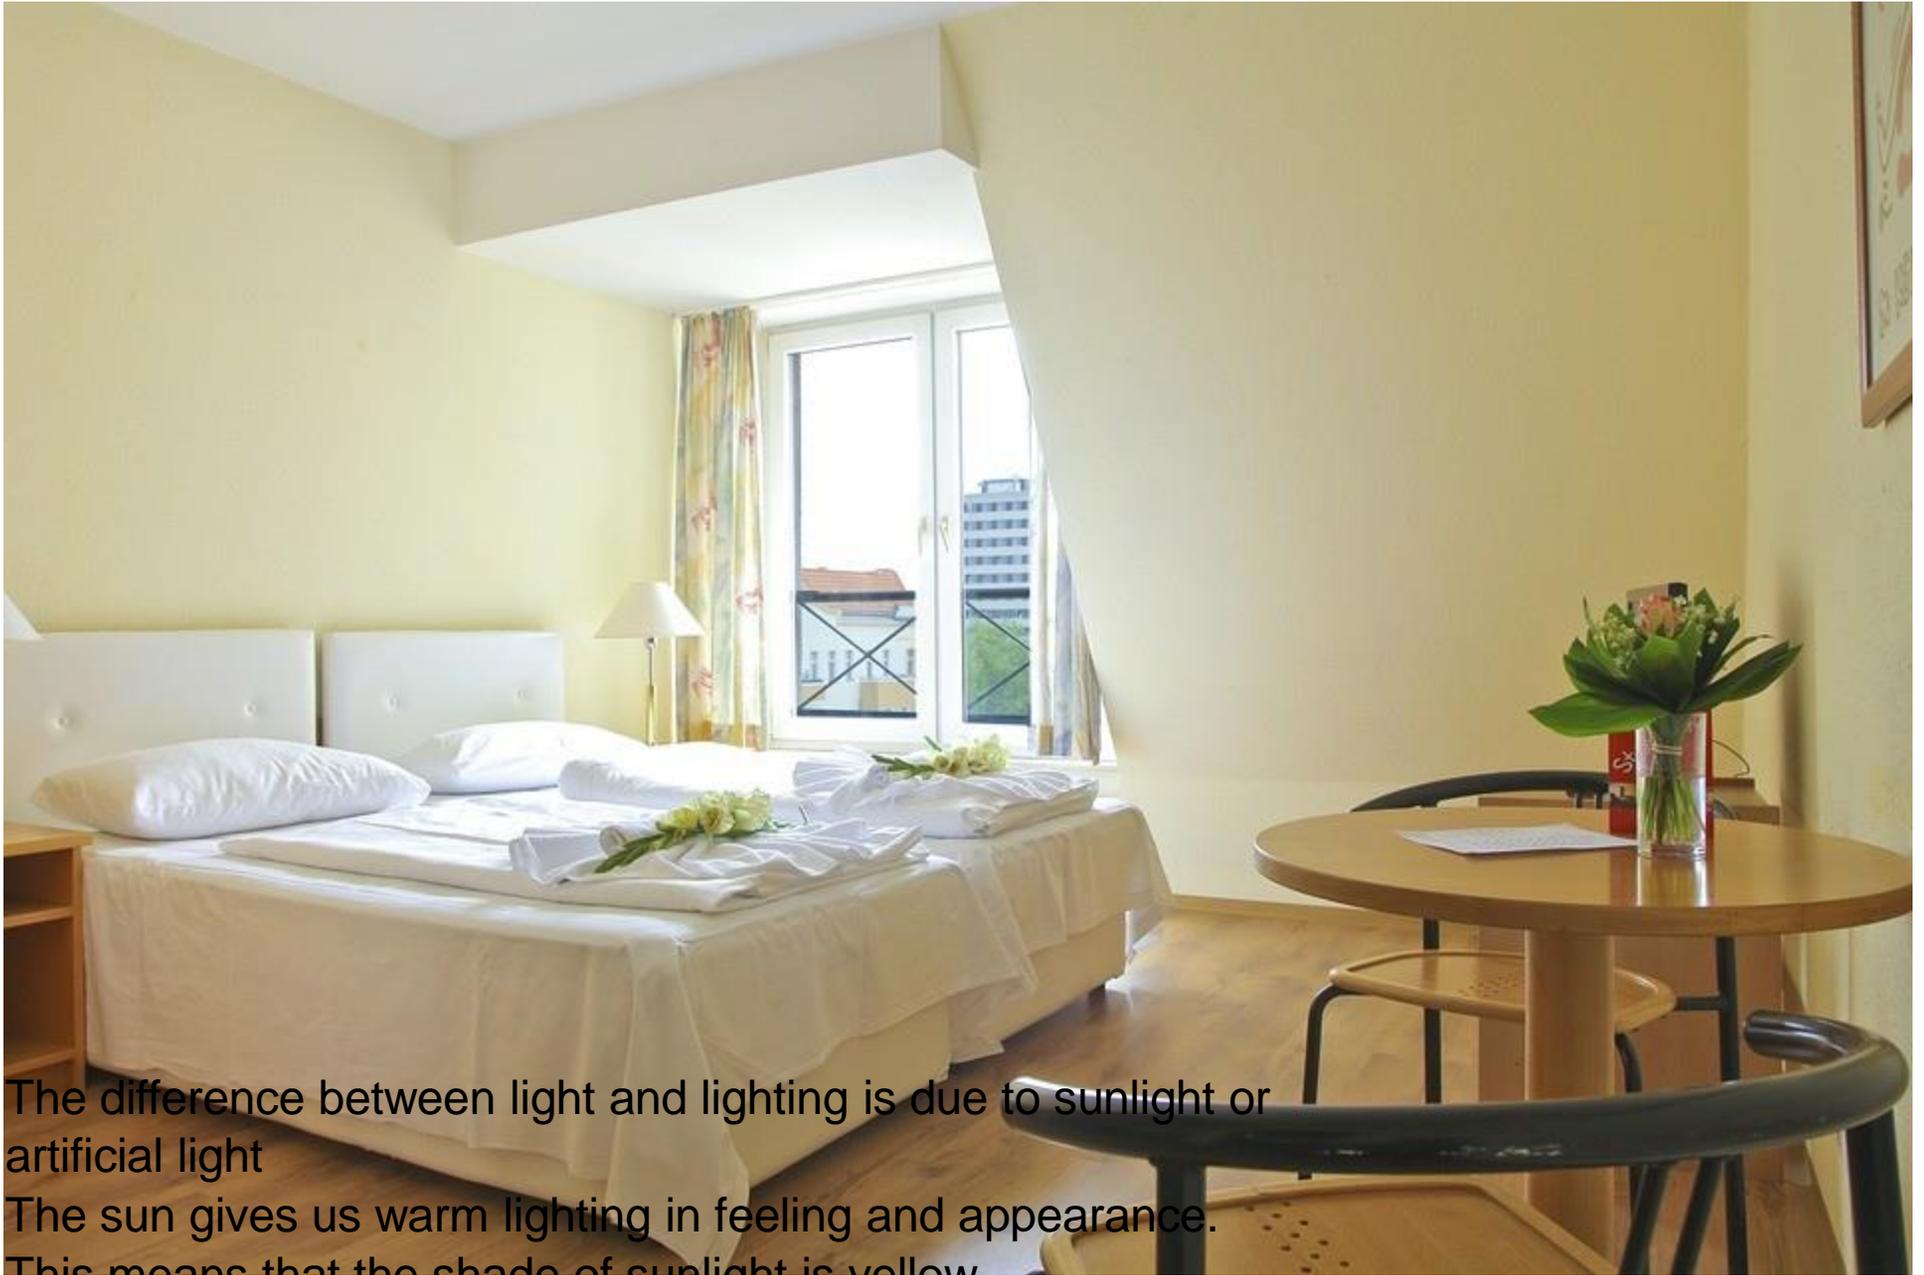

An existing power plan will be upgraded by changing the lighting fixtures, If we want to add lighting fixtures, we will do this in collaboration

Only the electrician in the field himself, it is very important to call the professional who controls the field in which he is engaged. In addition, the professional can advise us on electricity loads on an existing lighting point and can direct us in various technical directions that in collaboration with an interior designer we can achieve better results for our private home

Cube-Think Different
On line design college

The difference between light and lighting is due to sunlight or artificial light

The sun gives us warm lighting in feeling and appearance.

This means that the shade of sunlight is yellow.

In fact, the sun shades include all the rainbow shades in them

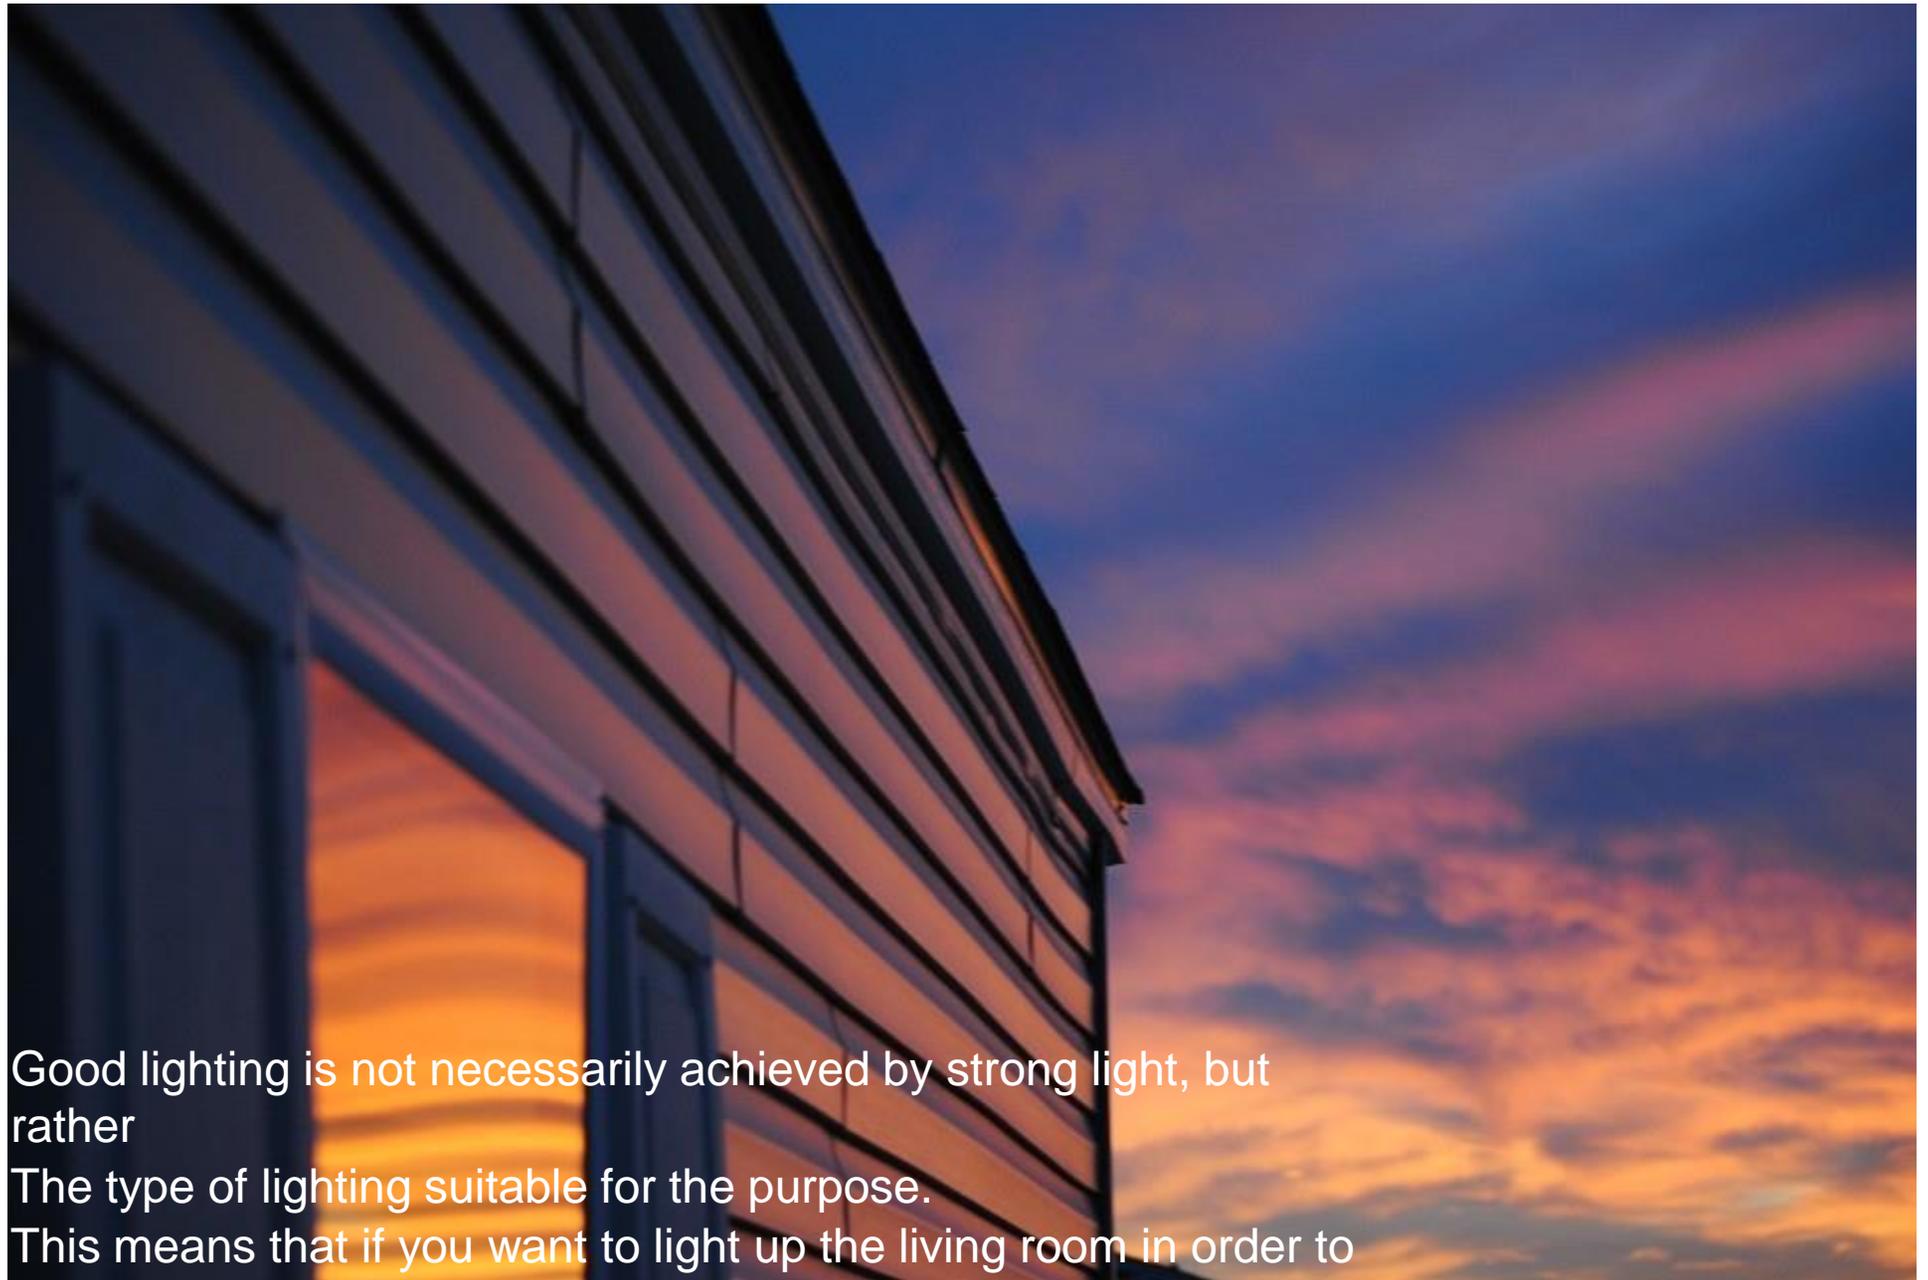

At the same time, artificial lighting is illumination created by man

Yes, man created warm lighting and also cold lighting

Cube-Think Diffrent
On line design college

Good lighting is not necessarily achieved by strong light, but rather

The type of lighting suitable for the purpose.

This means that if you want to light up the living room in order to be lit, there is no need to install halogen lighting.

Because the halogen light gives a lot of light but the lighting itself is very hot and powerful, so in the end the electricity bill will be very high

Cube-Think Different
On line design college

As designers, we must lead the tenants "in a path of lighting," to make the house

Be "paved" with lighting fixtures that will connect the different parts of the house.

This will keep the space clear. Our private home is divided into different spaces and parts and the lighting can make the house look as one part or as a separate part

Cube-Think Diffrent
On line design college

When we see a certain visual division, our brain interpret it as a separation.so we can use the light it self, in order to make a seperation between the different spaces. pleasant-looking division is achieved with the help of lighting.

Cube-Think Diffrent
On line design college

Entrance lighting invites us into the house.

One that is directed upwards. Light the front of the entrance, and the lighting is UP LIGHT (up light means a light that turn to the ceiling) Outside the door (above or to the side) will allow the door to open in comfort. the purpose of this light fixture is to show us the lock inside the door – that's it-but we will design the light itself...only because we LOVE design

Cube-Think Diffrent
On line design college

Living Room: In this space you should use lamps with different features
Allowing more flexibility in determining the type of atmosphere you want in each
Situation.

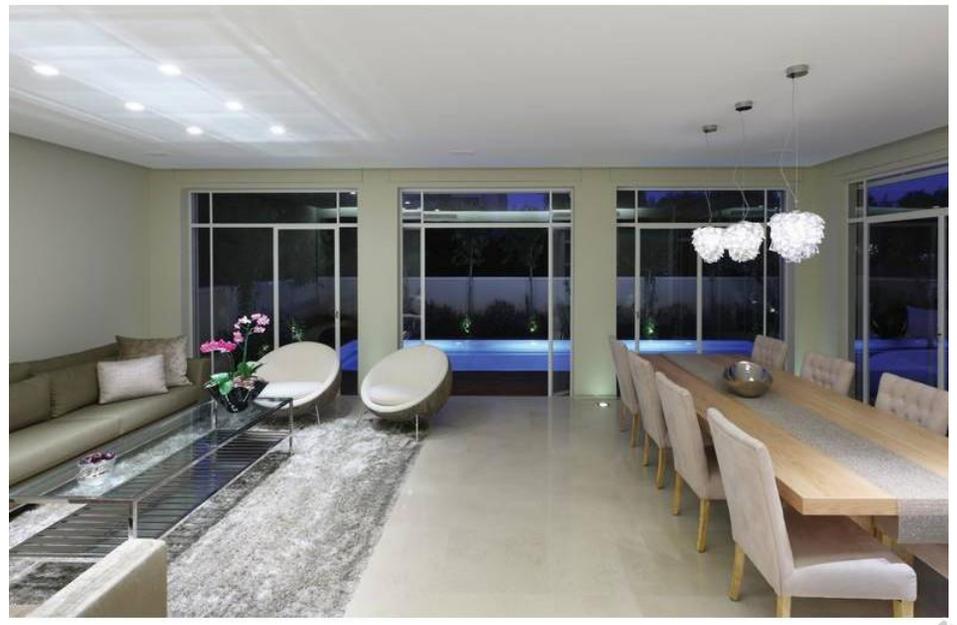

The living room lighting will be soft and bright. It is desirable to determine warm bulbs
And regular light bulb with the option of dimming (dimmers).

To emphasize niches, sculptures, pictures or any other architectural element.

For watching television hours, soft and gentle lighting should be placed behind the
Viewers. so that the reflection on the screen and the contrasts can be avoided.

Reading lighting is definitely a factor to consider when planning
The lighting plan in this space.

We must use different method of lighting` in our house in order to use it well.

As we can see, the lighting is pleasant and integrated with the right color styling. Blue, cream and brown combinations with warm lighting tones .

Gives us a pleasant sense of space that is pleasant to be in. Although This is a commercial space. but if we can implement it in our private Home, we can actually live in the hotel every day

Cube-Think Diffrent
On line design college

Dining Area: This lighting is usually characterized by a light fixture going down over the table

Starting at 2 inches to prevent diners from dazzling. And of course it all depends on the height of the ceiling.

Because, if the ceiling is low, maybe we will use a recessed light like spotlights. but if the ceiling is at an average height like 9 ft we can hang a lighting fixture that is at a height of 2 ft or 2.5 ft from the ceiling

Cube-Think Different
On line design college

Split lighting will allow illumination while opening the table for dinner.
The walls can be combined with standing light or light fixtures installed on the wall, to light the table and create a pleasant atmosphere for eating.
Split the light fixture can give us a dramatically design ability.

Cube-Think Diffrent
On line design college

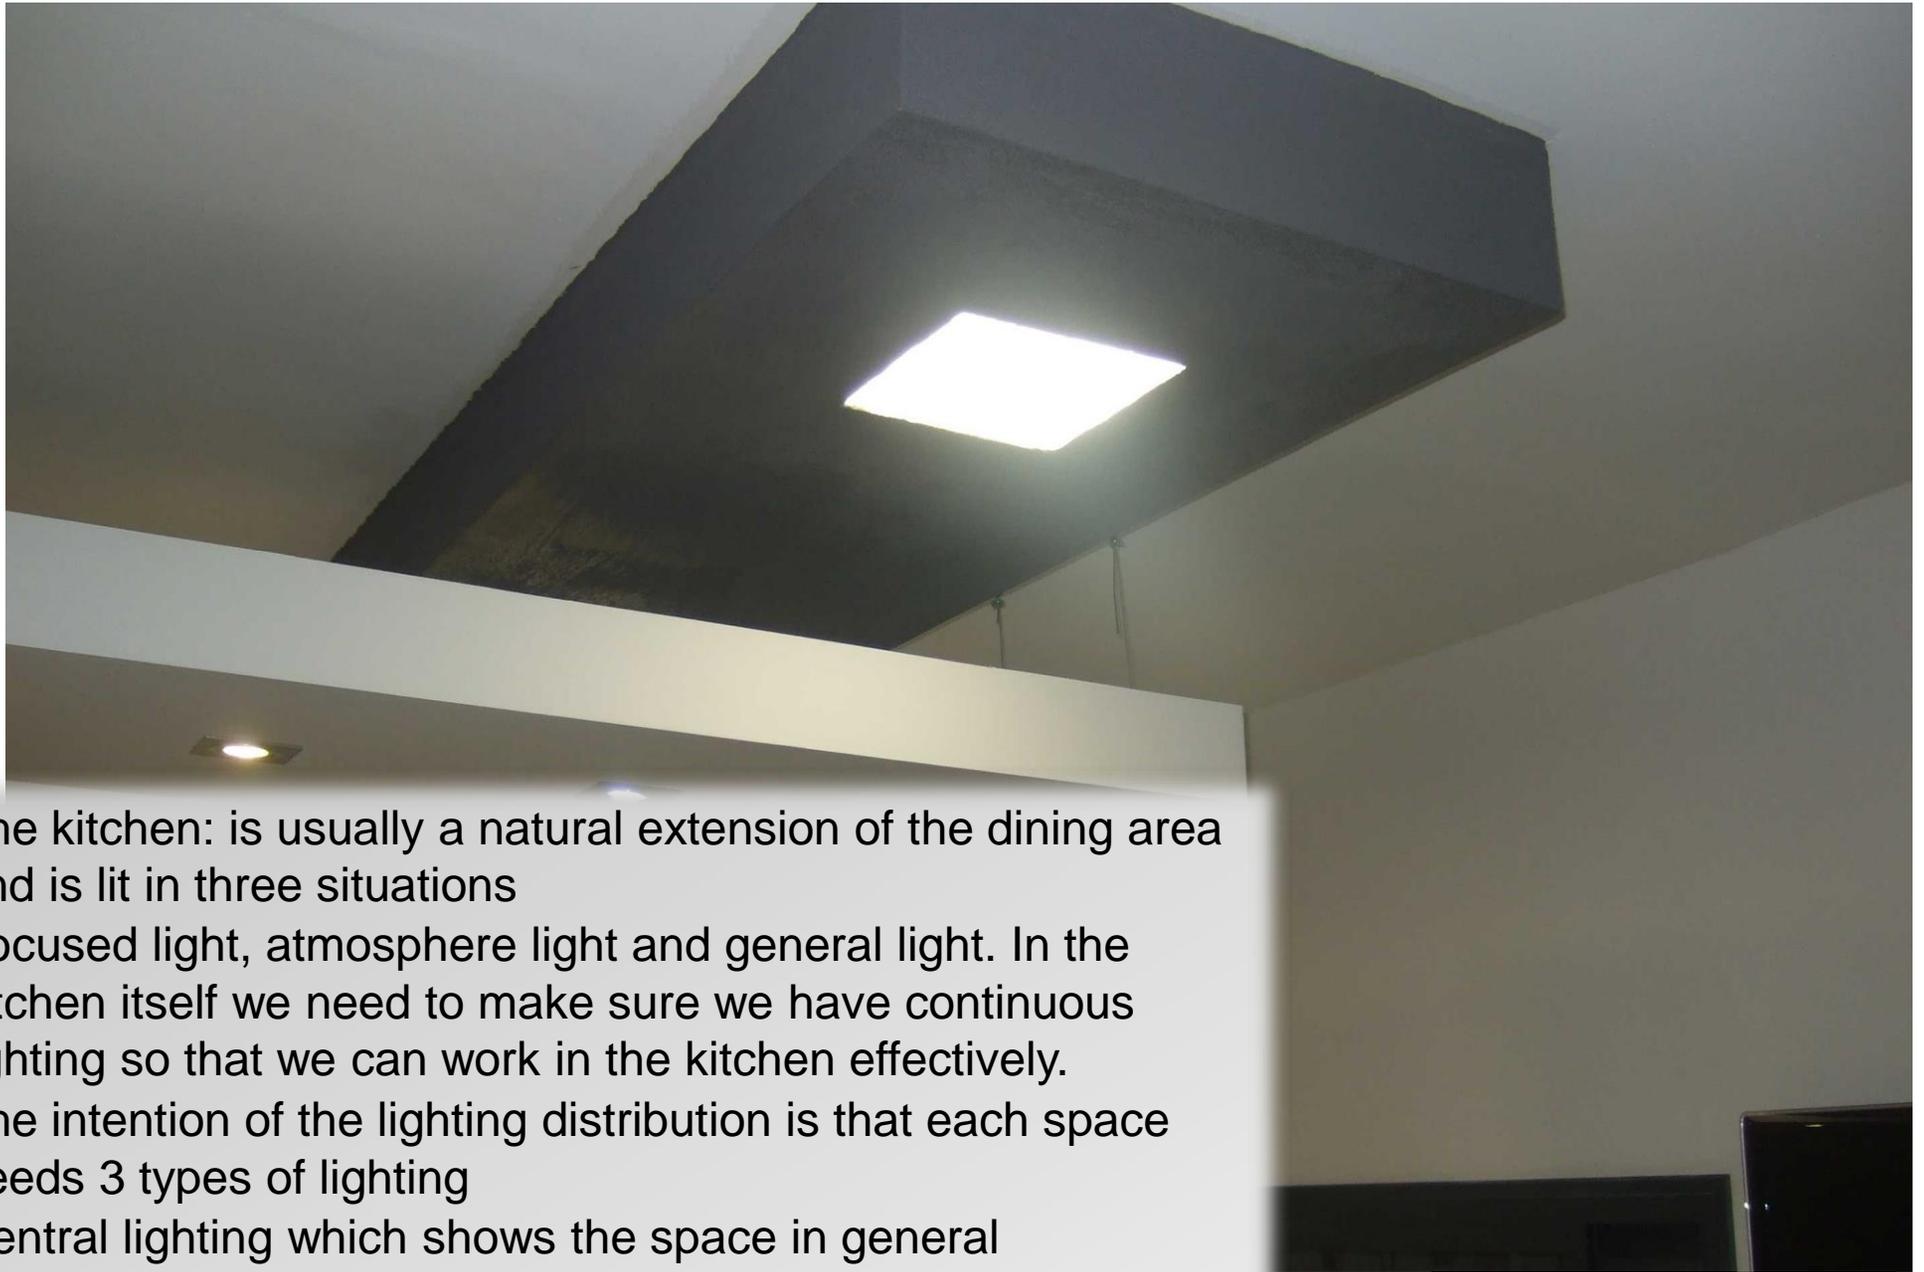

In this picture, we can see industrial lighting fixtures are scattered in space as light spots. The lighting fixtures are designed, in an industrial way. As you can easily see, the space is impressive but at the same time not as pleasant as we would expect our home to be.

At the same time, it is certainly possible and desirable to combine several different styles in one space - as long as - they contribute to each other and do not detract from the design style in a way that makes the space uncomfortable

Cube-Think Diffrent
On line design college

The kitchen: is usually a natural extension of the dining area and is lit in three situations

Focused light, atmosphere light and general light. In the kitchen itself we need to make sure we have continuous lighting so that we can work in the kitchen effectively.

The intention of the lighting distribution is that each space needs 3 types of lighting

Central lighting which shows the space in general

Atmosphere lighting gives us softer, more pleasant lighting, a kind of end-of-day lighting

-Focused lighting to show points of interest from points, for example: a sculpture, lighting above a work surface

Cube-Think Different
On line design college

Lighting of aisles and stairwells should be continuous and clear
Be careful of stairs and avoid glaring faults.

If you have stairs, you can light them with a different approach.
The stairs can be illuminated asymmetrically. That means to illuminate the first and third steps. This gives us a dramatic and interesting look

Where the stairs get a soft and pleasant look

Cube-Think Diffrent
On line design college

Bathroom: In this room it is advisable to install waterproof incandescent lighting on the sides of the mirror To properly reflect the observer's face. plus general lighting throughout the room.

At the same time, there is definitely a need to place ambient lighting so that you can only give ambiance and not have to use it practically. This means that there will be lighting with a dimmer and with it you can put ambient lighting for a good energy

The bathroom area needs to be lit in order to be able to use it safely.

So when we design the bathroom, this spa-style design is important, but safety is more important. So we can use different light fixtures that will give us a pleasant environment

Cube-Think Diffrent
On line design college

Children's room: Since the room is also used for games, for both study and sleep, It should be flooded in a central light to allow safe traffic and focused lighting for regular activities. I recommend that you will use 3 different light approaches in this room. Central light, atmosphere light and focused light. That means that the atmosphere light will be used for night time, the focused light will be used for study and the central light will be used for regular activity

The bedroom is characterized by public and private lighting for proper and efficient use of space, in the bedroom is recommended to put 3 types of lighting as we've mentioned before. Central lighting, ambient lighting and focused lighting

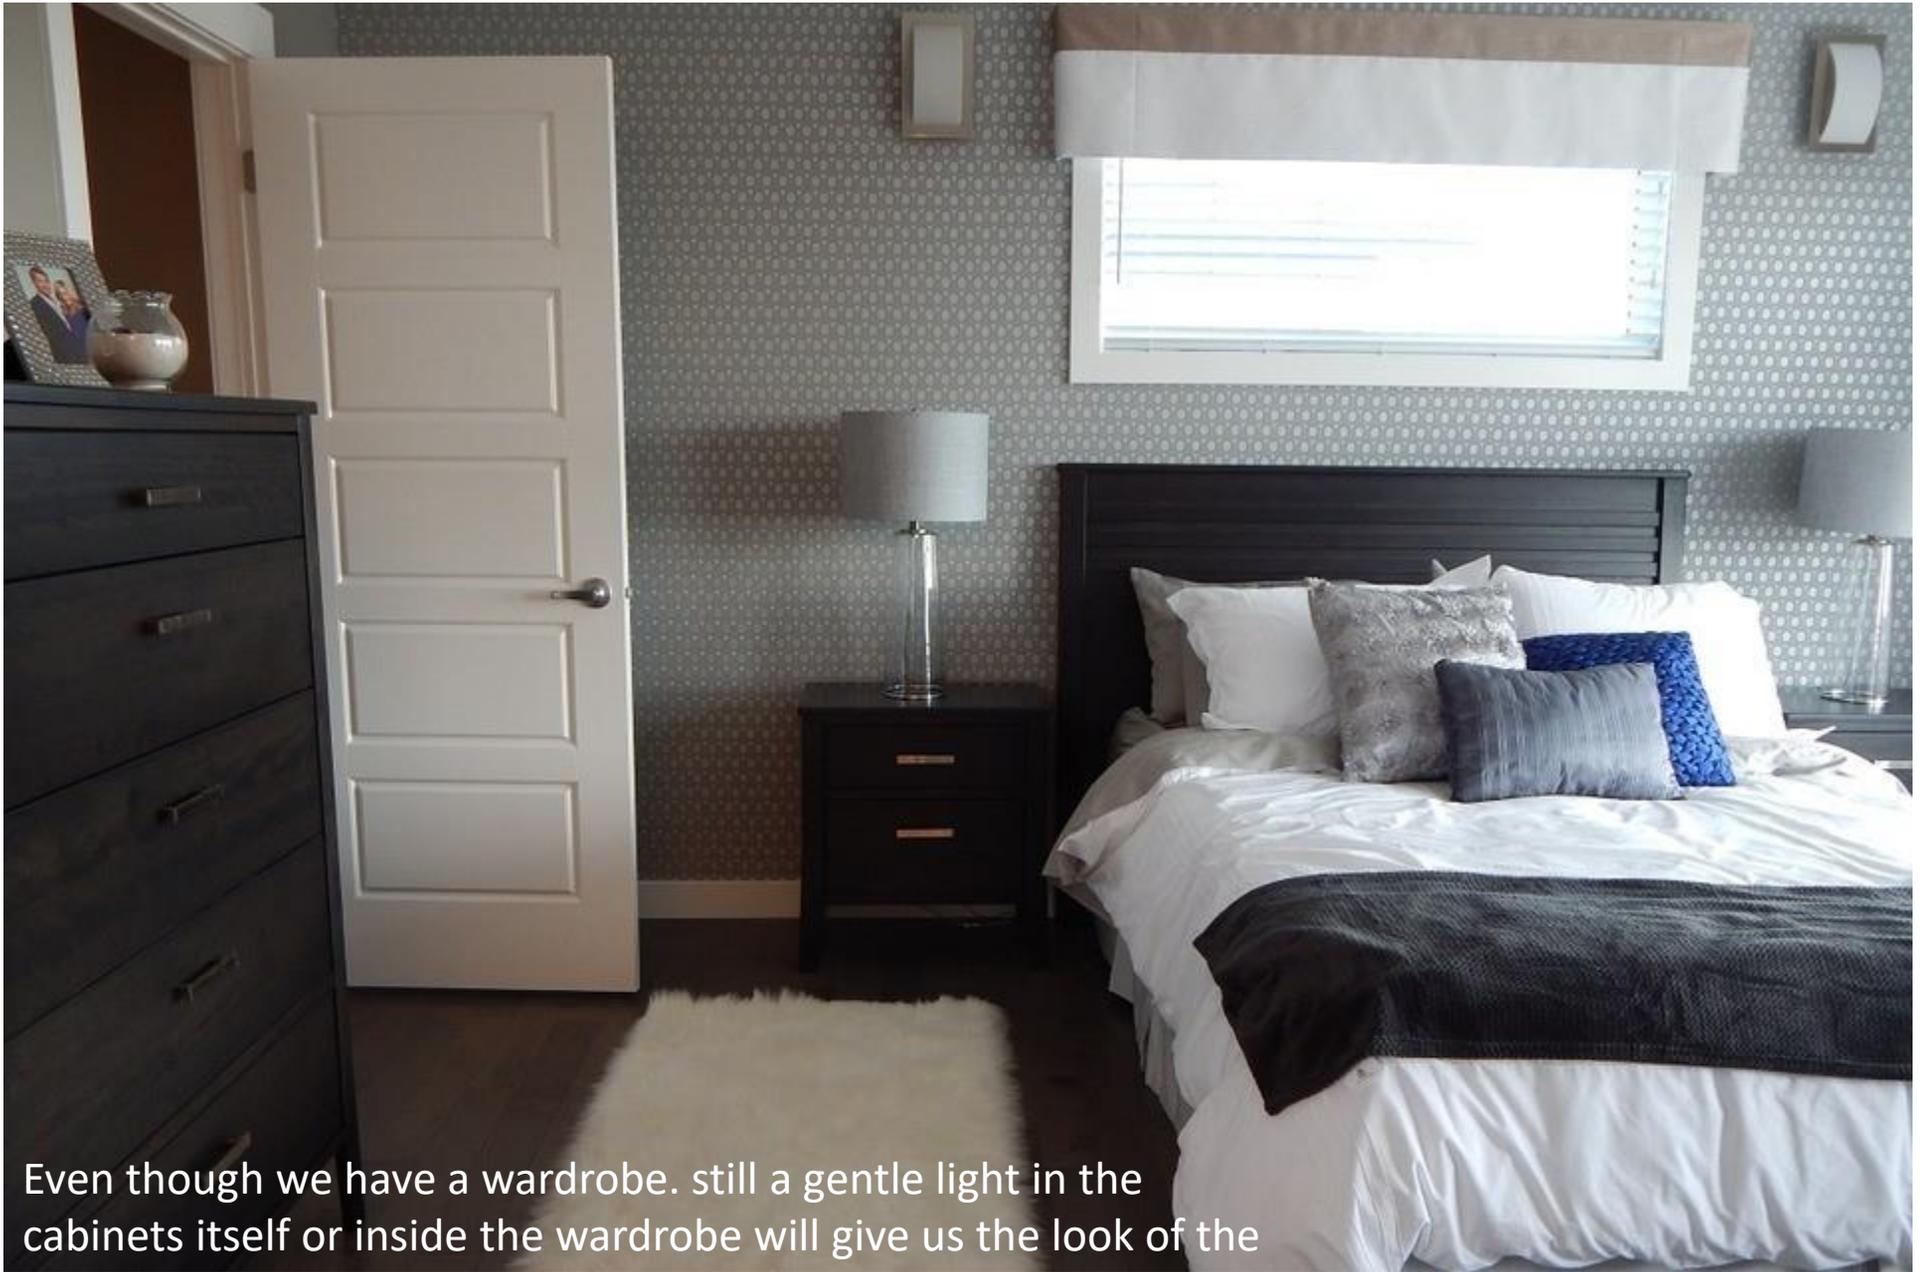

Cube-Think Diffrent
On line design college

For a very simple reason, focused lighting should give us the ability to orient ourselves in the room as we enter. Atmosphere lighting should give us our natural and calm energy at the end of the day when we want to recharge and rest. Focused lighting is recommended for placement in the wardrobe or in niches, images we want to highlight.

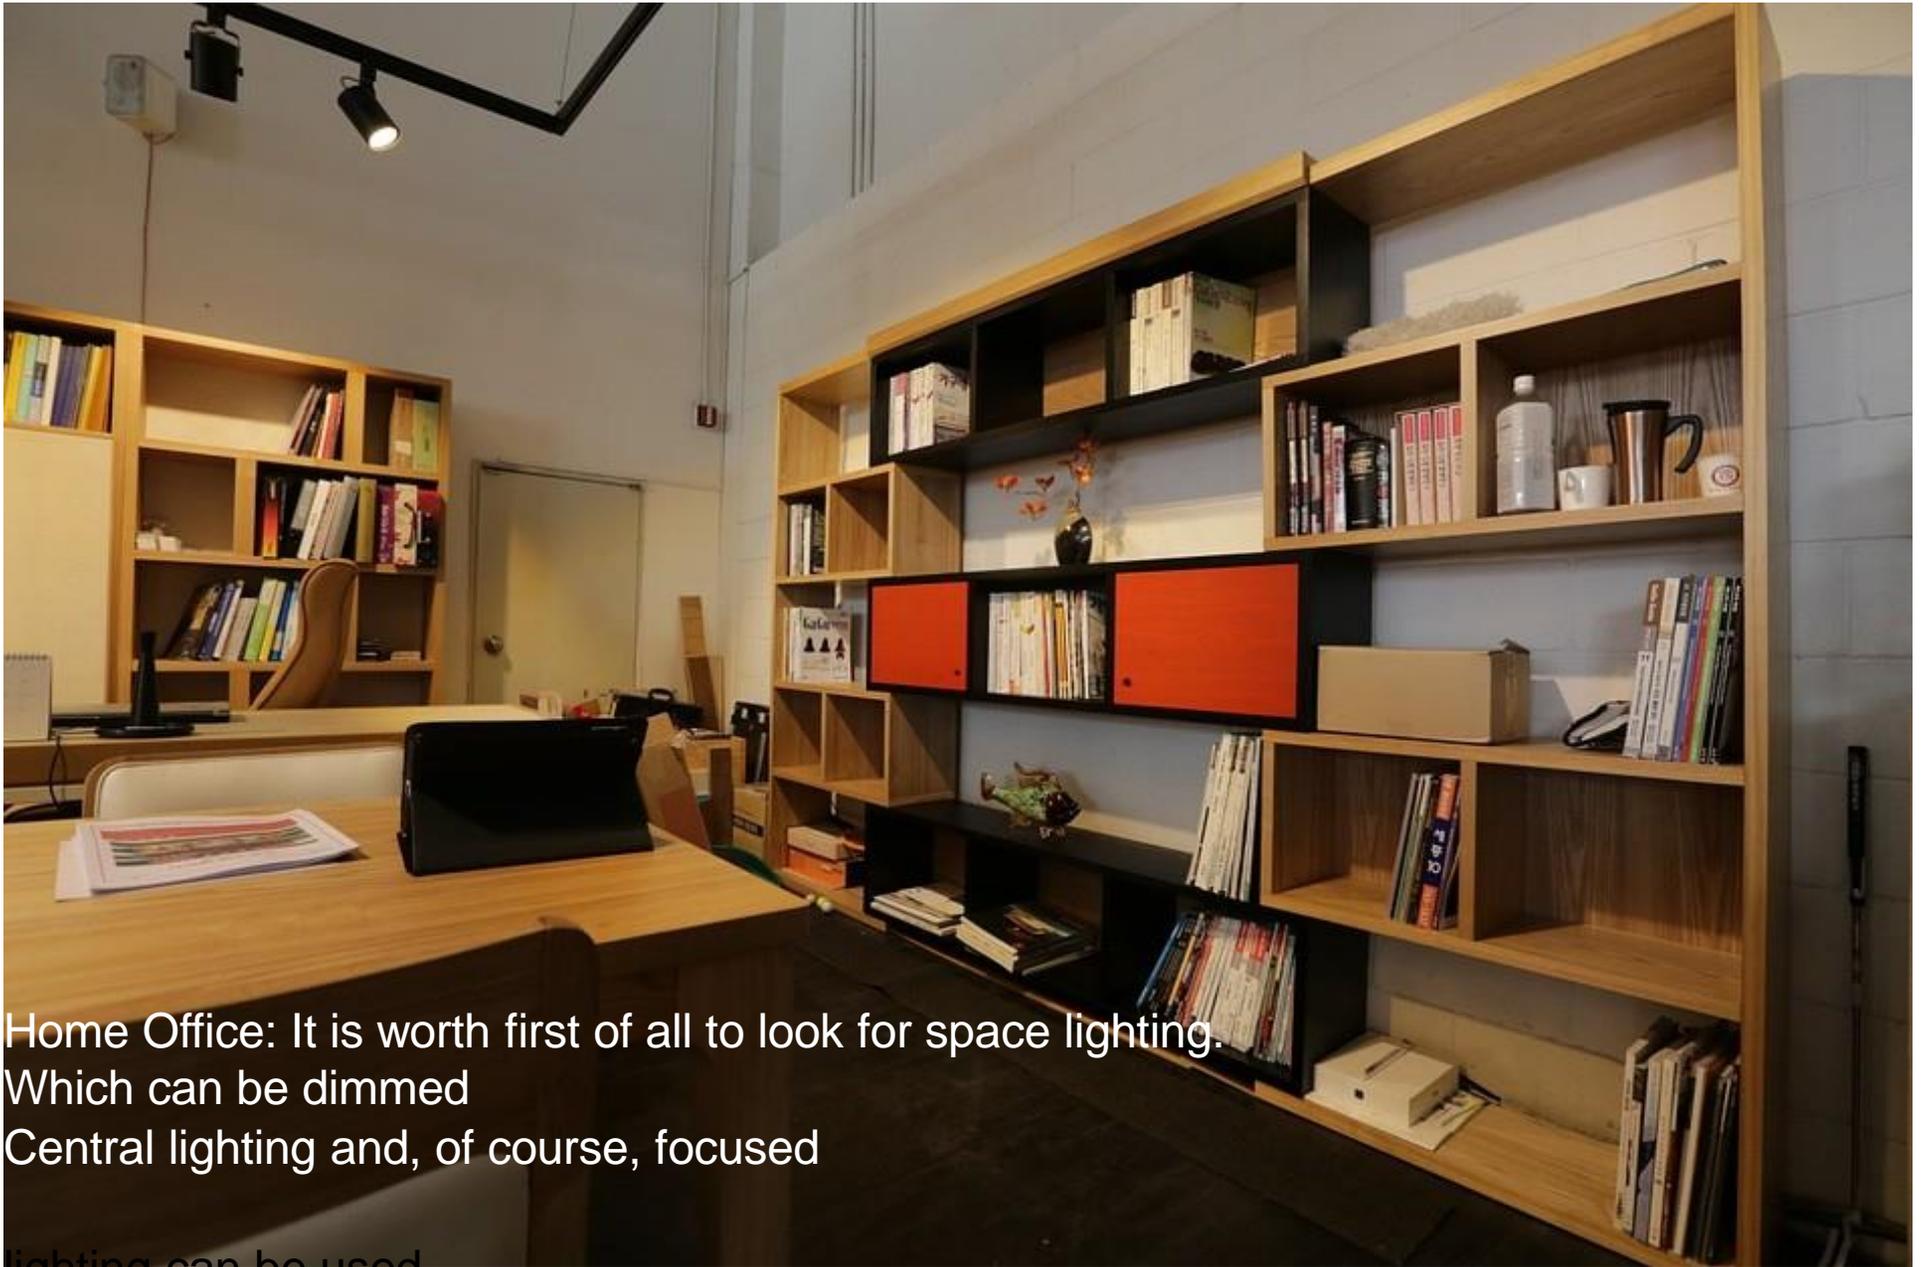

Even though we have a wardrobe. still a gentle light in the cabinets itself or inside the wardrobe will give us the look of the

clothes we want use. on the other hand we will not be dazzled by strong light in the early hours of the morning when getting up

Cube-Think Diffrent
On line design college

Home Office: It is worth first of all to look for space lighting.
Which can be dimmed
Central lighting and, of course, focused
lighting can be used.

Focused lighting will come in the form of focused lighting fixtures for the desk, or you can integrate lighting from a soft spot inside the desk. Our home office is a very important place, so we must Light it properly

Cube-Think Diffrent
On line design college

A symmetrical lighting can give us a screen without blinding, so you can combine recessed lighting or soft lighting behind the screen so there is no blinding on the screen itself

Cube-Think Diffrent
On line design college

Bulbs are divided into three common types in the home environment:

Incandescent bulbs, halogen bulbs, charcoal bulbs and compact fluorescent bulbs

Cube-Think Different
On line design college

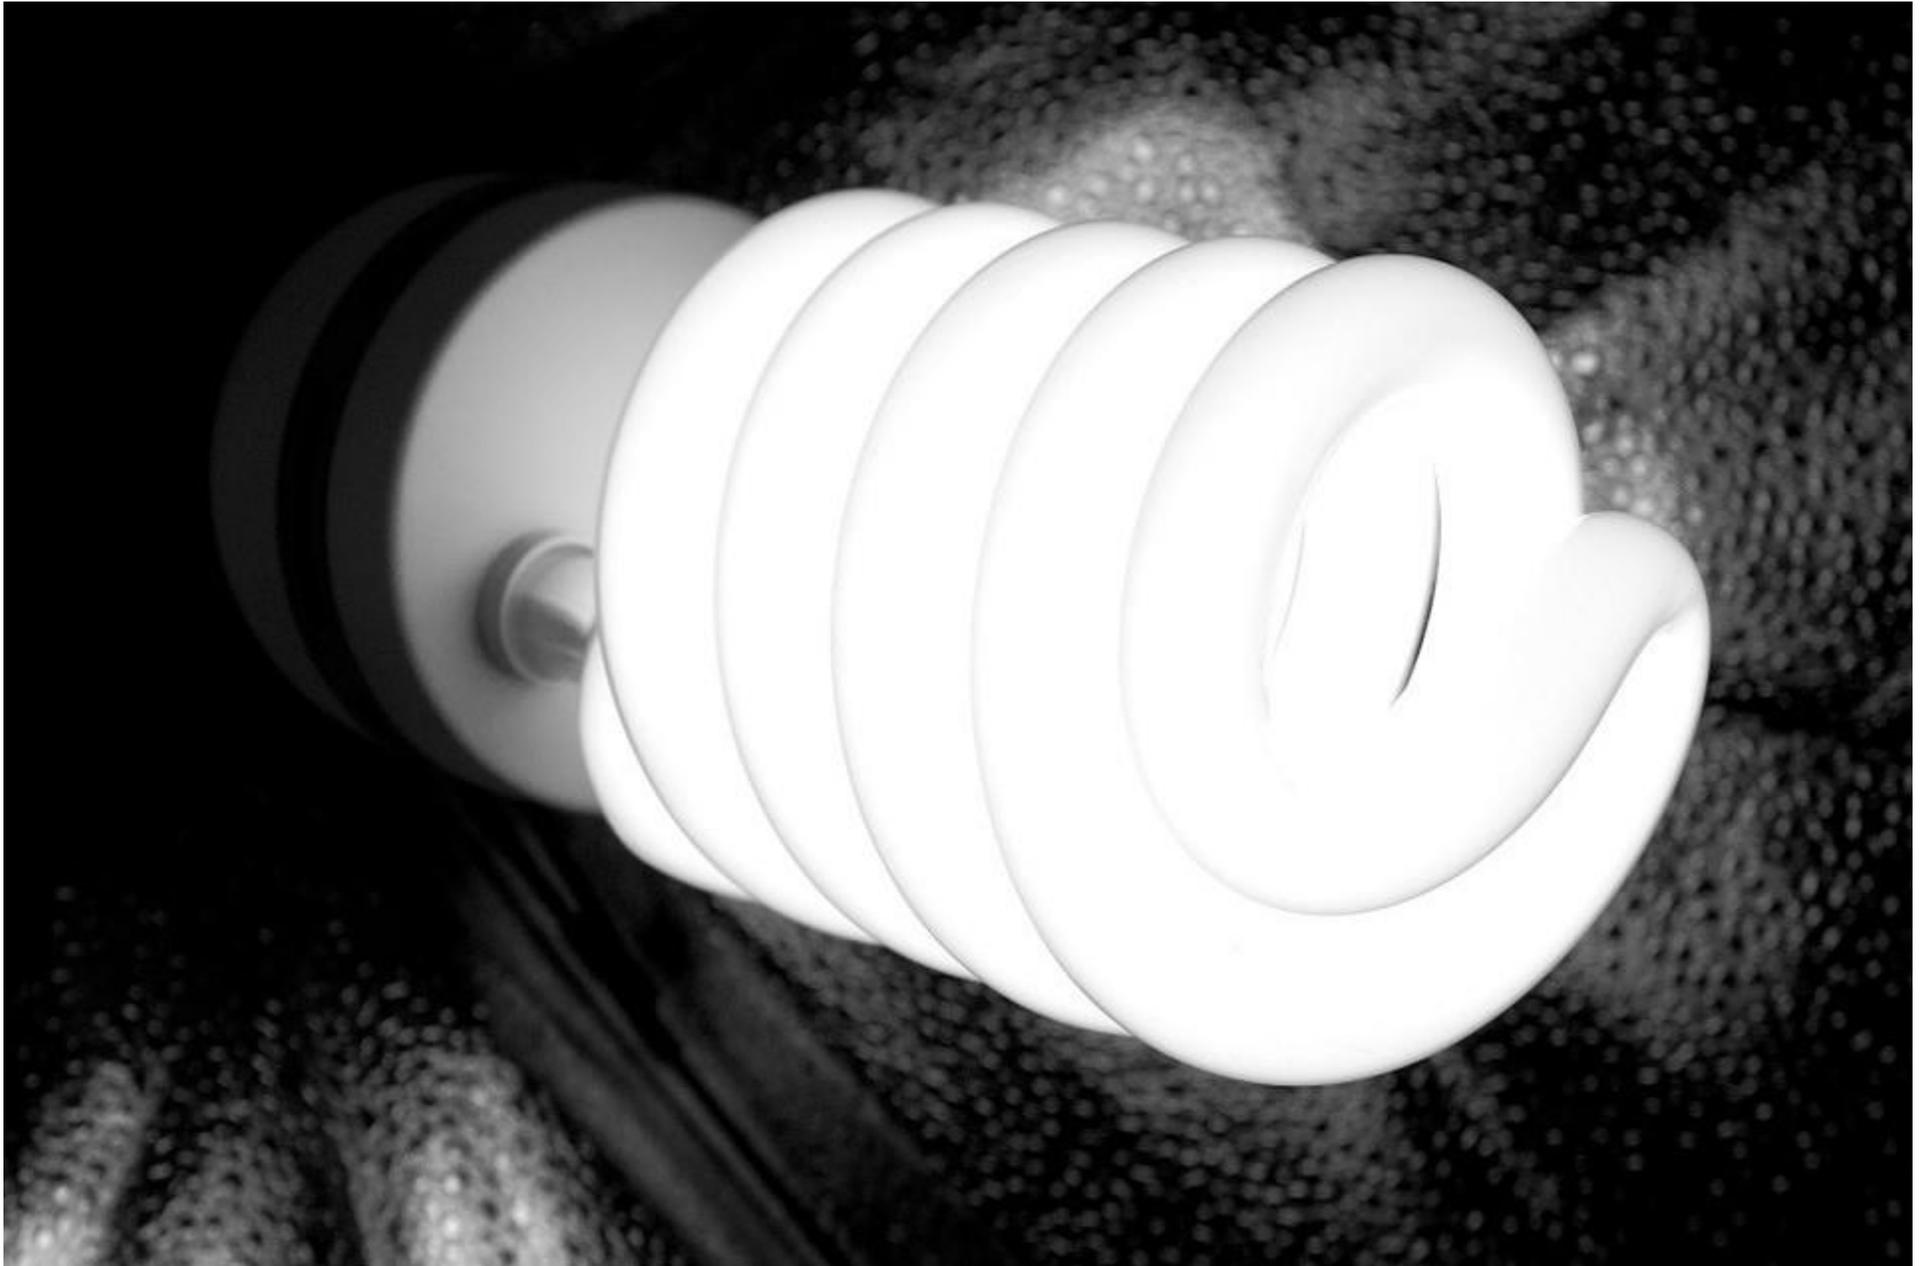

Light bulbs are light bulbs that reach 3,400 degrees when lit, their light shades are yellow and the feeling that they radiate is warm.

Cube-Think Diffrent
On line design college

Fluorescent bulbs are lit as a result of gas burning in the contents, the lighting they give is white or blue. the feeling that such a light gives is cold. However, such a light bulb very brightly illuminates the space itself where it is

Cube-Think Different
On line design college

LED bulbs are the hottest name in the world of lighting design today. And they offer a number of ways and methods of installation. The most common ones are RECESS LIGHT and come in yellow or white lighting.

Cube-Think Different
On line design college

A drama created by the right combination of color and light, which is the design we should use in order to create an outstanding design space.

Also, when it comes to choose the light fixture we need to take in consideration the look & style of the light fixture itself. such as: the style of the lighting body, the materials from which it is made and of course the type of lighting itself

Cube-Think Different
On line design college

Wall-mounted lighting fixture that provides UP & DOWN lighting, meaning that the lighting comes out from the bottom of the lighting fixture and above it

This light fixture is suited to a lot of spaces, and can give a pleasant look to every space it will be

Cube-Think Different
On line design college

LED RECESS lamp which can be combined with the ceiling beams. This is a great subscription that fits any purpose we want to achieve. This light bulb gives warm light and yet illuminates the space optimally. In today's interior design arena, this light fixture is in high demand of use.

Cube-Think Different
On line design college

The halogen bulb, is a warm light in its color shade as well as the feeling it gives. this bulb is consuming a lot of electricity, it is wasteful of electricity. At the same time, it very brightly illuminates spaces in which it is. This light fixture is best used outdoor and not inside the house.

This lighting fixture is excellent for kitchens because every lamp can be turned in a different direction, so our kitchen is always lit and can be worked on.

This light fixture is well suited for places who need a different light angle. this fixture can have a warm light or white light.

Cube-Think Diffrent
On line design college

In this picture we can see a Bulbs hanging in a "masculine look". combined with terracotta stone on the wall. This is the look I wanted to give to this villa I designed. The lighting itself serves as a transition between the living space and the kitchen. This light fixture has only one purpose, to light the hallway and give another look.

Cube-Think Different
On line design college

In this kitchen I used a dry wall to lower the ceiling. I used this element with combination of light fixture. This element is above the island and the counter top. Creating an interesting space division combined with central, focused lighting for operation

Cube-Think Different
On line design college

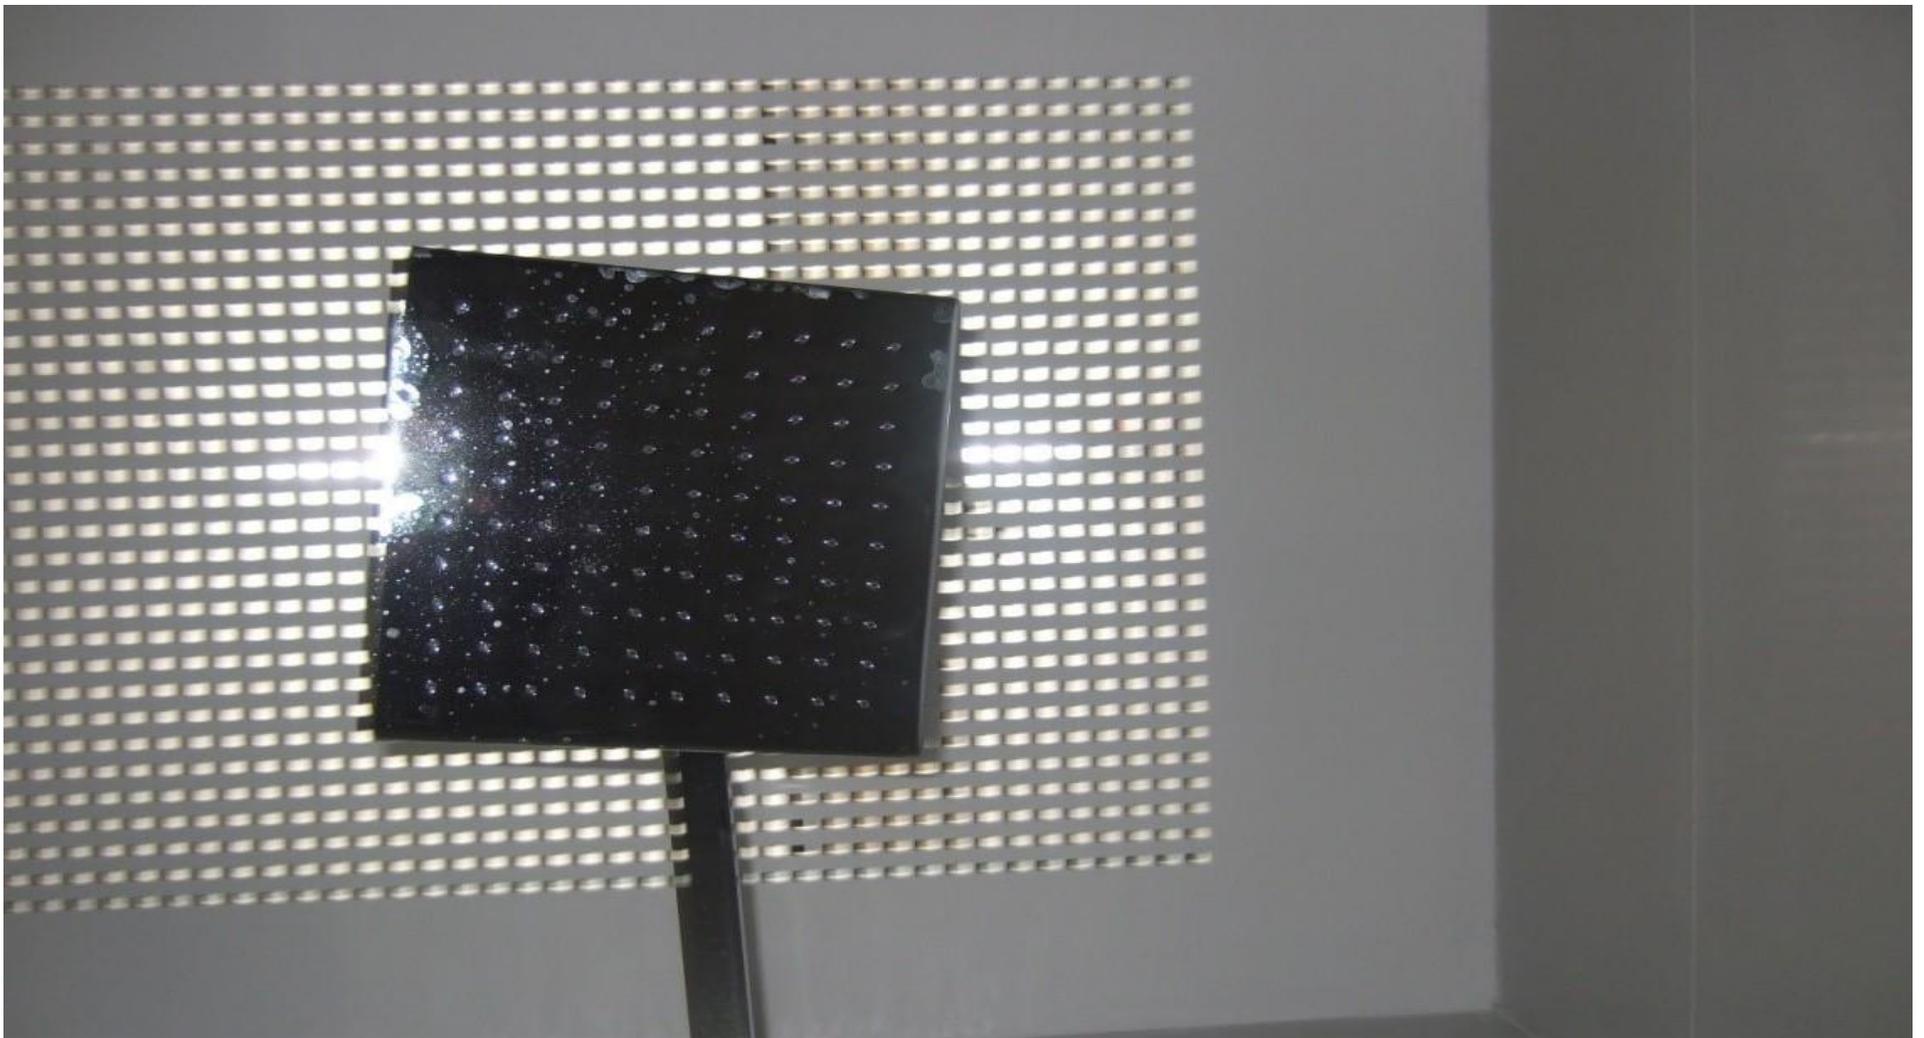

Green plasterboard for the bathroom. The plasterboard has decorative holes which I placed lighting above. As you can see, the lighting itself comes out through the decorative holes and actually seems to be showered in the light

Cube-Think Different
On line design college

You can see that the decorative holes are only in specific locations. which makes the design of the bath take a turn in the atmosphere itself. Using light in an unusual way is a major consideration when designing our space, you should not look at the space in a regular way.

Regular means that it is very common (which can be okay) but if you are looking for something different, then you must look at things in a different way. when I designed this bathroom it was most important for me to give a different feeling to my costumers

Cube-Think Diffrent
On line design college

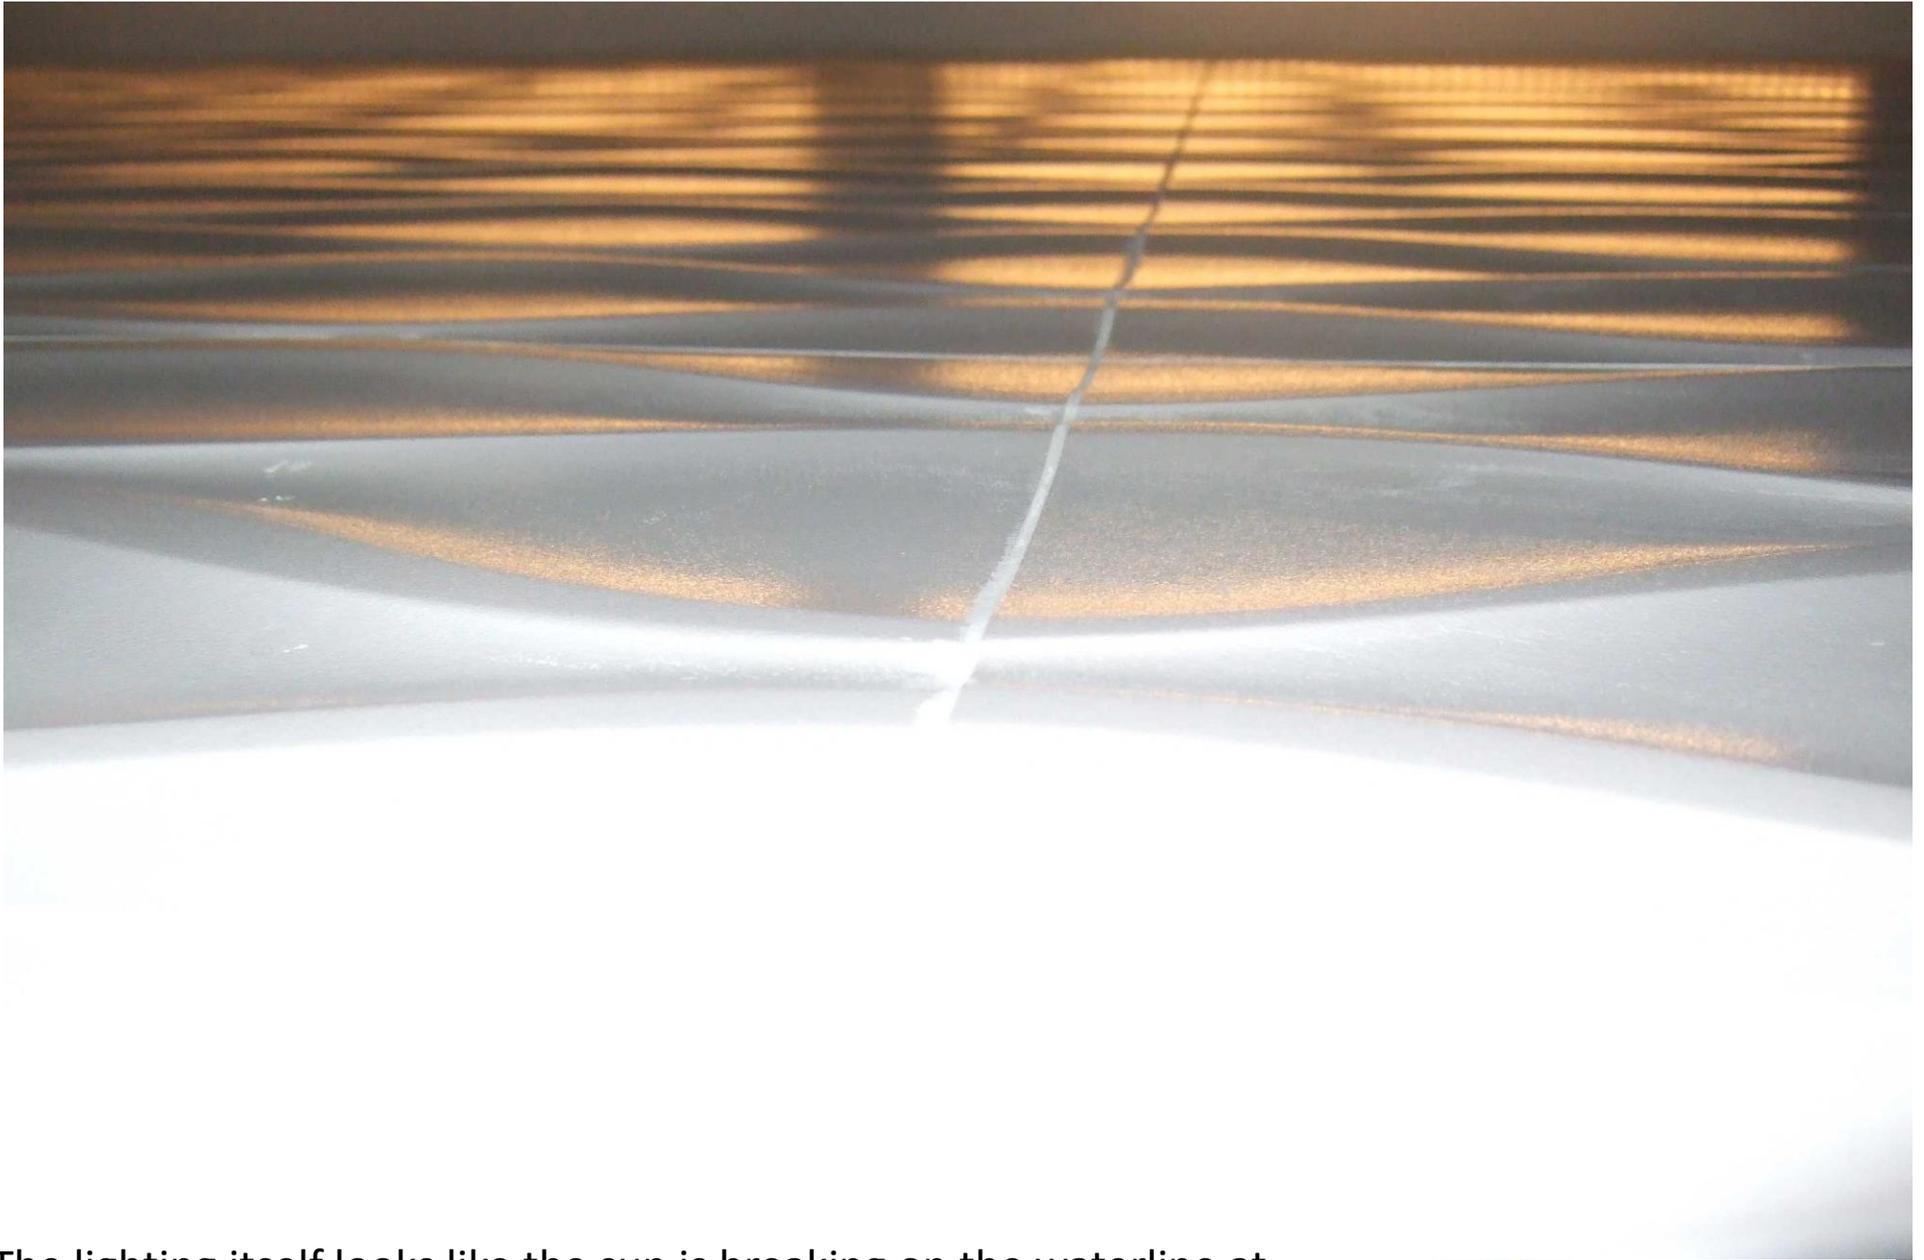

Star lighting in the bathroom.
Perforated green plasterboard with warm lighting inside.
I designed the same element for the children's bathroom as well.

Cube-Think Different
On line design college

The lighting itself looks like the sun is breaking on the waterline at beautiful sunset. My main idea in designing the space itself was to give the soft look of a sunset or a starry night, when I see the results I'm glad I succeeded

Cube-Think Different
On line design college

As we can see, we have central lighting here, an atmosphere lighting that gives us a convenient use of the bathroom. At the end of the day a good shower with pleasant lighting definitely gives a desired result

Cube-Think Different

We have reached the end of the class, thank you for your participation
If Home Styling is exciting to you and you want to learn more or take your
passion to the next step - feel free to contact us and see what curriculum we
can offer you so you can work as Home Styling or Interior Designers during the
next few month.

Our curriculum is one of the most advanced and we teach you all the
advanced tools available today in the world of interior design and Home
staging

You can contact us at style4us@gmail.com
